

ARTAX PORE FILLER

HARDENING AND FILLING PORES

After grinding the floor surface, it is extremely open pored and the previous hard surface is removed. With our product Artax, a special hardening agent is applied and ground in between each grinding operation. The lithium based product penetrates deeply into the floor and provides a very hard surface finish.

APPLICATION FIELDS

- Industrial floors (made of concrete, screed, designer screed, terrazzo)
- Natural stone floors (marble, granite)
- Synthetically modified cement floors

ADVANTAGES

- Simple to work in with spray systems
- Floors walkable after 6 hours, complete hardening after 24 hours
- After grinding out, floor is free from scratches and small pores are closed
- Use of Artax shortens grinding processes by two work steps
- Surface is more resistant
